Anthony Duenez Ramirez

Soledad, CA | 831-225-9296 | LinkedIn | Github | Portfolio

EDUCATION

California State University of Monterey Bay, Seaside, CA *B.S. Computer Science (expected May 2027)*
Stanford University, Stanford, CA *Summer Session (2023)*

TECHNICAL SKILLS

Languages: Swift, Python, C++, JavaScript, Java, PHP
Databases: Supabase, PostgreSQL, Room (SQLite)
Frameworks/Tools: Node.js, Express, React, SwiftUI, REST APIs, HTML/CSS
Developer Tools: Git, Docker, Mocha, Chai, Figma

EXPERIENCE

Afterglo - iOS Mobile App Developer Intern *Sept 2026 – Present*

- Develop and enhance features for a live dating app using **Swift, SwiftUI,** and **Expo**
- Integrate backend services and database management with **Supabase**, ensuring strict data security
- Fine-tune **AI features** and maintain full compliance with **App Store guidelines**

bizzNEST (Digital NEST) - Software Development Associate *Sept 2026 – Present*

- Build responsive client sites in **React, Node.js, and WordPress/PHP**
- Use **AI tools** (Cursor, LLMs) to accelerate development and prototyping
- Collaborate with design and cross-functional teams to ship client projects

Open Energy Dashboard - Open Source Contributor *Nov 2025 – Dec 2025*

- Built a partial-update **REST API** system preventing unintended data overwrites
- Refactored backend **API logic** to **improve maintainability** across services
- Added **automated tests** for energy conversion in **Dockerized Node.js/PostgreSQL**
- Implemented **backend test** coverage using **Mocha and Chai**
- (Pull Request #1) (Pull Request #2)

PROJECTS

VaultAI: Local-First Document Intelligence (React, TypeScript, Python, Nemotron)

- Built a team hackathon project that processes checks, receipts, invoices, contracts, and scans locally with **OCR** and **Nemotron**.
- Added source-line citations, deterministic validation, and human review for uncertain records; ran Nemotron locally through **vLLM** on an ASUS Ascent GX10.

Steps: Screen Time Control (Swift, SwiftUI, HealthKit, FamilyControls)

- Built and shipped an iOS app on the App Store that restricts selected apps until users reach daily step goals
- Integrated **HealthKit** and **FamilyControls** for real-time tracking and OS-level restrictions
- Designed onboarding, navigation, and daily reset flows using **SwiftUI**

AlphaTuring - Search & Rescue Robot (Python, YOLO, Gemini Robotics ER, Gemini Flash, ElevenLabs API)

- Architected software stack integrating onboard **YOLO** vision models with **Gemini Robotics ER** to detect survivors and dynamically adjust positioning in real time.
- Built a low-latency multimodal voice pipeline using **Gemini Flash** and **ElevenLabs TTS** to conduct live casualty intake and verbalize actionable first-aid instructions.
- Engineered telemetry pipelines streaming live camera feeds, GPS pings, and incident status to a centralized dashboard for real-time responder dispatch.
